

Coatings

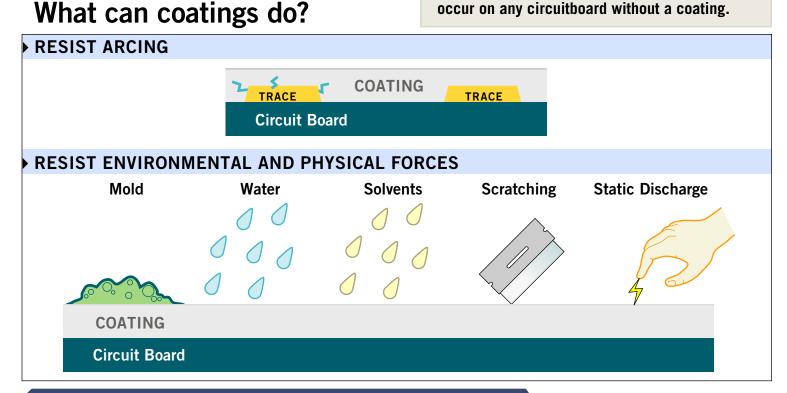

Why use coatings?

Protective coatings are necessary to ensure a long and effective working life of electrical and electronic components. MG Chemicals offers a wide range of coatings suitable for protecting circuit boards, windings & coils, transformers, field coils, and stator windings from electrical arcing, environmental factors, and physical force.

What is arcing?

Arcing occurs when voltage jumps from one surface to another due to the close proximity of parallel currents. The result is a board malfunction or damaged components. It may occur on any circuitboard without a coating.
